TABLE OF CONTENTS

Overview	1
1. Production	2
1.1. Number of maple farms by province	2
1.2. Number of maple taps by province	2
1.3. Maple syrup production by province	3
1.4. Production of maple products – 15-year trend.....	3
1.5. Gross value of maple products by province.....	4
2. Trade.....	5
2.1. Exports	5
2.1.1. Maple products exports by province – by value	5
2.1.2. Maple products exports by province – by volume	5
2.1.3. Top maple products export destinations – by value.....	6
2.1.4. Top maple products export destinations – by volume	6
3. Availability for consumption.....	7
3.1. Maple products available for consumption.....	7
4. World data.....	8
4.1. World imports	8
4.1.1. Top importers of maple sugar and maple syrup – by value	8
4.1.2. Top importers of maple sugar and maple syrup – by volume.....	9
4.2. A Comparison: United States national statistics for maple syrup	10
4.2.1. United States maple syrup production by state.....	10
4.2.2. United States maple syrup production value by state	11
5. Key resources	12

Overview

Canada and the United States are the only countries who produce maple syrup at commercial scale. In 2025, the Canadian maple syrup industry accounted for more than 75% of the total world maple syrup production, with 90.0% of Canadian production originating from Quebec, 6.1% from New Brunswick, 3.7% from Ontario, and 0.2% from Nova Scotia. The United States is the second-largest producer, accounting for approximately 25% of global production, with 53.1% of American production originating from Vermont, 14.4% from New York, and 9.6% from Maine. Maple products accounted for 6.3% of all Canadian horticulture¹ farm cash receipts² in 2025.

Contrary to the general trend in agriculture where a decrease in the number of farms was observed in previous censuses following the long-term trend towards fewer and larger operations, the number of maple product farms increased by 19.2% from 2016 (5,340 farms) to 2021 (6,364 farms). This growth was most notable in Quebec, where in recent years, there has been an increasing trend in the number of producers participating in maple syrup production. This growth in the number of producers was driven by the 2017 addition of 5 million maple 'taps' by the Federation of Quebec Maple Syrup Producers (QMSP) who control the quantity of production in that province and maintain a strategic reserve of storable maple syrup to minimize fluctuations in pricing and availability of supply, which is driven by natural variability in annual production.

In 2025, Canadian maple producers harvested more than 113.4 million kilograms (18.9 million gallons) of maple syrup. Despite favourable weather conditions, overall production in 2025 was down by 5.1% compared to the previous year's record-setting production. The gross value of Canadian maple syrup reached \$840.5 million in 2025. Although this represents a 4.6% decrease from the previous year, it marks an 85.5% increase since 2021.

Total production of maple syrup in Quebec amounted to 102.1 million kilograms (17.0 million gallons) in 2025, a 5.9% decrease compared to 2024. Similarly, production in New Brunswick was down by 3.8% over the previous year to reach 7.0 million kilograms (1.2 million gallons). Meanwhile, in Ontario, maple producers harvested 4.1 million kilograms (690,000 gallons) in 2025, with higher yields, additional taps and an extended season within the northern region leading to a 13.7% production increase within the province over 2024. Production in Nova Scotia reached 252,378 kilograms (42,000 gallons) in 2025.

Canadian maple syrup exports totaled 82.4 million kilograms (13.7 million gallons) in 2025, which increased by 15.7% over the 71.2 million kilograms (11.8 million gallons) exported in 2024. In terms of value, Canadian exports of maple products amounted to \$844.2 million in 2025, up by 17.2% over the previous year. Canadian maple products were exported to 69 different countries around the world in 2025; 64.2% of the exports were to the United States, 7.2% to Germany, 4.9% to the United Kingdom, 4.5% to Australia, 4.0% to France, and 3.1% to Japan, with other export destinations accounting for the remaining 12.0% of total export volumes.

¹ The Canadian horticultural sector includes the fruit, vegetable, ornamental, ginseng, honey and maple products sub-sectors.

² Farm cash receipts measure gross revenue of farm businesses. They represent the cash income received from the sale of agricultural commodities.

1. Production

1.1. Number of maple farms¹ by province

	2011	2016	2021	2021 % Share
Newfoundland and Labrador	1	0	0	0.0%
Prince Edward Island	2	1	2	0.0%
Nova Scotia	36	48	39	0.6%

3. Availability for consumption

3.1. Maple products available¹ for consumption^{2,3} (kilograms per person)

	2019	2020	2021	2022	2023
Maple Sugar	0.39	0.52	0.47	0.67	0.44

Notes:

1. Food available per person is calculated by dividing the domestic disappearance by the Canadian population as of July 1st of the reference year, at the retail level.

Domestic disappearance represents the total food available for human consumption from the Canadian food supply chain.

Total Supply = Beginning stocks + Production + Imports

Domestic Disappearance = Total supply – Exports – Manufacturing - Waste - Ending stocks

2. Does not adjust for losses, such as waste and/or spoilage in stores, households, private institutions or restaurants, or losses during preparation.

3. Beginning in 2024, Statistics Canada moved to a biennial publication schedule for consumption data. As a result, the 2024 release was skipped. The next update - covering 2025 - will be published later this year, and the table will be updated once the new data are released

Source: Statistics Canada. Table 32-10-0054-01 Food available in Canada

4. World data

4.1. World imports

4.1.1. Top importers of maple sugar and maple syrup – by value (thousands of Canadian dollars)
